ABOUT

Technical project manager with experience in integrations and API development. I manage cross-functional teams (including external ones) at all stages: from decomposing business tasks to launching solutions in production. I understand system architecture and the logic of service interaction, and work at the intersection of business and development. I work with complex integrations and legacy systems and help get tasks to delivery faster.

WORK EXPERIENCE

- **Port Transit** — Remote
  Technical Project Manager — *September 2023 — Present*
  - **Integrations and API**: Coordinated the integration of a new service with 3 internal systems (REST API, including legacy). Worked out the data structure, exchange formats and error handling together with developers.
  - **Incidents and diagnostics**: Localized errors in integrations by analyzing logs and data in the databases of different services, which sped up incident resolution.
  - **Business task decomposition**: Translated business tasks into technical solutions: shaped requirements and the architecture of service interaction. Through systematic elaboration, reduced the time of discussion and implementation of tasks by 30%.
  - **Technical solution design**: Designed the database structure and service interaction logic, defined the distribution of data and responsibility between systems together with developers.
  - **Documentation and processes**: Built processes in legacy projects: introduced regular sync meetings, structured the team's work and initiated technical documentation. Dove into the product and business logic, influencing decisions on system development. Justified expanding the team to speed up development and reduce workload.
  - **Product expertise**: Took part in key decisions on the development of the electronic transport documents project, defining development directions together with the business.
- **IDPay (fintech)** — Remote
  Java Developer — *July 2021 — February 2023*
  - **Backend Admin API development**: Strengthened scalability and fault tolerance.
  - **350% load growth**: Optimized code and improved stability.
  - **Legacy code migration**: Took part in migrating the system to Spring Boot.

EDUCATION

- **Southern Federal University** — Rostov-on-Don
  Institute of Mathematics, Mechanics and Computer Science, Bachelor's — *2019 — 2023*
- **Samsung IT School** — Rostov-on-Don
  Fundamentals of Mobile Development — *2018 — 2019*

ADDITIONAL EDUCATION

Yandex Practicum — DevOps for Operations and Development
VK Education — Fundamentals of Product Management
Coursera — Budgeting and Scheduling Projects, Initiating and Planning Projects
Michigan State University (Coursera) — Data Analytics with R

SKILLS

Tools: Jira, Confluence, Notion, Miro, Lucidchart, GanttPRO, GitLab CI/CD, Postman, Swagger
Technical skills: SQL, API, REST, JSON, XML, systems integration, client-server architecture
Methodologies: Agile, Scrum, Kanban
Skills: project management, cross-team collaboration, requirements management, technical documentation, risk management, prioritization
Languages: Russian (native), English (B2), French (B2)
